Important safety information

▶ Please read this instruction manual carefully and completely before using the product.
▶ Always include this instruction manual when passing the product on to third parties.
▶ Do not use an obviously defective product.

Preventing damage to health and accidents
▶ Do not listen at high volume levels for long periods of time to prevent hearing damage.
▶ Always maintain a distance of at least 3.94” (10 cm) between the ear cups and the cardiac pacemaker or implanted defibrillator since the product generates permanent magnetic fields.
▶ Keep the product, accessories and packaging parts out of reach of children and pets to prevent accidents and choking hazards.
▶ Do not use the product in situations which require special attention.

Preventing damage to the product and malfunctions
▶ Always keep the product dry and do not expose it to extreme temperatures (hairdryer, heater, extended exposure to sunlight, etc.) to avoid corrosion or deformation.
▶ Only use attachments/accessories supplied or recommended by Sennheiser.
▶ Only clean the product with a soft, dry cloth.
▶ Unplug the power supply unit from the wall socket to completely disconnect the product from the mains power supply.
▶ Do not short-circuit the contacts of the product. Make sure that no metal objects (e.g. paper clips, hair pins, earrings) come into contact with the interfaces and contacts.
▶ Only use the base station for charging DW series headsets.

Intended use/Liability
The headset system can be used for calling and – together with a computer (VoIP) and/or a telephone – for audio input/output and is intended for professional office or call center use.

It is considered improper use when this product is used for any application not named in this instruction manual.

Sennheiser does not accept liability for damage arising from abuse or misuse of this product and its attachments/accessories. The risk is to be borne by the user.

Sennheiser is not liable for damages to USB devices that are not consistent with the USB specifications.

Sennheiser is not liable for damages resulting from the loss of connection due to flat or overaged rechargeable batteries or exceeding the DECT transmission range.
Safety instructions for Lithium-Polymer rechargeable batteries

In extreme cases, abuse or misuse of rechargeable batteries can lead to:

**WARNING**
- explosion,
- fire development,
- heat generation or
- smoke/gas development.

<table>
<thead>
<tr>
<th>Switch rechargeable battery-powered products off after use.</th>
<th>Do not heat above 70°C/158°F, e.g. do not expose to sunlight or throw into a fire.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only charge rechargeable batteries at ambient temperatures between 10°C/50°F and 40°C/104°F.</td>
<td>When not using rechargeable batteries for extended periods of time, charge them regularly (about every 3 months).</td>
</tr>
<tr>
<td>Dispose of defective products with built-in rechargeable batteries at special collection points or return them to your specialist dealer.</td>
<td>Only use rechargeable batteries recommended by Sennheiser and the appropriate chargers.</td>
</tr>
</tbody>
</table>
Scope of delivery and overview of the DW series

The DW series allows you to combine base stations (BS) and headsets (HS) to meet your needs. The listed headsets and base stations are compatible with each other. The DW series base stations marked with ML in their name are optimized for Microsoft® Lync™.

The scope of delivery includes – depending on the product purchased – a base station and/or a headset with corresponding components.

Base stations with components

- **DW BS**: for fixed line phone and computer
- **DW BS ML**: for fixed line phone and computer, optimized for Microsoft Lync
- **DW BS USB**: for computer
- **DW BS USB ML**: for computer, optimized for Microsoft Lync
- **DW BS Phone**: for fixed line phone
Headsets with components

- **DW Office – HS**: monaural, with different wearing styles
- **DW Pro1 – HS**: monaural, with headband
- **DW Pro2 – HS**: binaural, with headband

Individually adjusting the headset

Putting the headset on and adjusting it

**Using the DW Office – HS with the ear hook**

1. Insert the ear hook into the ear hook slot.
2. Pre-shape the ear hook by bending it slightly.
3. Place the ear hook around your ear.
4. Bend the flexible ear hook so that the headset sits comfortably and securely on your ear.
Individually adjusting the headset

Using the DW Office – HS with the headband

1 Remove the ear hook by carefully pulling it upwards.
2 Replace the name plate with cheek spacer with the basic name plate. This is necessary in order to be able to rotate the headset’s microphone boom (see diagram 4).
3 Attach the headset to the headset holder of the headband.
4 Rotate the microphone boom and adjust the headset so that the ear pad rests comfortably on your right or left ear.
Individually adjusting the headset

Using the DW Pro1/Pro2 – HS

1 Rotate the microphone boom.
2 Bend the microphone boom so that the microphone is about 0.8” (2 cm) from the corner of your mouth.
3 DW Pro1 – HS: Adjust the headset so that the ear pad rests comfortably on your right or left ear.
4 DW Pro2 – HS: Adjust the headset so that the ear pads rest comfortably on your ears.
Labeling the headset

Change the lettering of the name plate as shown.

1. OPEN “Name Plate Maker”
2. TYPE
3. PRINT
4. CUT

WWW www.sennheiser.com/name-plate-maker
Testing the headset system and the sound quality

Adjusting the headset system using the DIP switches

1. Press the Link button on the headset to disconnect an existing wireless link between base station and headset. The LEDs on the headset and on the base station go off.

2. Use a pointed object (e.g. a ball pen) to set the DIP switches to the desired position.

Configuring the handset lifter/hook switch – DIP switches 1 and 2

The DIP switches 1 and 2 are only assigned a function on the DW BS, DW BS ML and DW BS Phone base stations.

Limited volume (country specific)
- EU and US version: in compliance with Directive 2003/10/EC
Pairing the headset and the base station

Upon delivery, the headset and the base station are already paired. You only have to pair the headset with the base station if you have purchased the headset and base station separately or if you want to hold a conference call.

“easy pairing” – Pairing the headset and the base station

► Place the headset into the magnetic holder of the base station.
► The Headset LED alternately flashes red and blue.
  If pairing is successful, the Headset LED flashes 3 times blue and then lights up continuously, indicating that the base station and the headset are paired.
► If the Headset LED flashes 3 times red and then goes off, start a new pairing attempt by placing the headset again into the magnetic holder of the base station.

Establishing a wireless link

► Press the Link button on the headset or press the backlit button (either PC or Phone) on the base station. The link is established. The Link LED on the base station lights up blue and the Headset LED flashes blue slowly.

Disconnecting a wireless link

► Press the Link button on the headset or press the backlit button (either PC or Phone) on the base station. The link is disconnected. The Link LED on the base station and the Headset LED go off. The headset is in standby mode.

If your telephone has a built-in electronic hook switch supporting the MSH standard, you can only disconnect the wireless link between headset and base station by placing the headset into the base station.
### Adjusting the audio signal by means of the dial tone

1. Put on the headset and press the Phone button on the base station.
2. Press the Link button on the headset. The Link LED on the base station lights up blue.
3. Lift the handset. You hear a dial tone.
4. Set the ABC switch to the position A, B or C so that you can hear a clear dial tone in the headset.
Testing the headset system and the sound quality

Adjusting the volume

Adjusting the microphone volume of the call transmission
By default, the microphone volume control is set to position 4. This setting is suitable for most telephones.

▶ Make a call to someone who will help you find the correct sensitivity setting for your microphone.

▶ Turn the microphone volume control so that the other party can hear you at a comfortable level.

Adjusting the microphone volume of the USB transmission
Some softphones adjust the microphone sensitivity automatically.

▶ Activate this function in order to be able to optimally use the microphone and, via your operating system, adjust the microphone sensitivity so that the other party can hear you at a comfortable level (see the Help function of your operating system).

Adjusting the automatic audio transmission “Auto Audio”
With the “Auto Audio” function activated and in the case of a USB connection, the audio signals – e.g. from Windows® Media Player® or iTunes® – are automatically transmitted to the headset.

When you receive a call or when a connection to Skype™ or HeadSetup is established, the audio transmission stops and you hear for example the ring tone. The “Auto Audio” function is activated by default.

Activating the “Auto Audio” function:
▶ Use a pointed object to press the Set button for approx. 5 seconds. The Link LED κ rapidly flashes blue several times.

Deactivating the “Auto Audio” function:
▶ Use a pointed object to press the Set button for approx. 5 seconds. The Link LED κ rapidly flashes red several times.
Making calls using the headset

Adjusting the volume

**WARNING**

Hearing damage due to high volumes!

Listening at high volume levels for long periods can lead to permanent hearing defects.

- Set the volume to a low level before putting on the headset.
- Do not continuously expose yourself to high volumes.

You can adjust the ring tone volume, the volume of the acoustic signals and of the audio signal using the Audio button. With base stations connected to a computer, you can also adjust the volume of the audio signal by using the volume control of your operating system.

Adjusting the ring tone volume and the volume of the acoustic signals

- Make sure that the headset is in standby mode (the Link LED on the base station is off). If necessary, press the Link button on the headset.
- To adjust the volume, move the Audio button as shown in the diagram. When the minimum or maximum volume is reached, you hear a double beep in the headset.

![Diagram of DW Office – HS and DW Pro1 – HS with audio buttons and volume settings](image1)

Adjusting the volume of the audio signal

You can adjust the volume of the audio signal by means of the dial tone or during a call.

- Make sure that a link is established between headset and base station (the Link LED on the base station lights up blue). If necessary, press the Link button on the headset.
- To adjust the volume, move the Audio button as shown in the diagram. When the minimum or maximum volume is reached, you hear a double beep in the headset.

![Diagram of DW Office – HS and DW Pro1 – HS with audio buttons and volume settings](image2)
Changing the direction of the volume up/down function

- On the Audio button, check which direction is assigned “volume down”.
- Simultaneously press and hold the Link button and the Audio button for 5 seconds. The Headset LED alternately flashes blue/red.

Push the Audio button in the direction “volume down” until the Headset LED goes off. The direction of the volume up/down function of the Audio button is changed. The headset switches to standby mode.

Muting the headset’s microphone

- Press the Audio button. The microphone is muted. While the microphone is muted, the Link LED on the base station flashes red.

Unmuting the headset’s microphone

- Press the Audio button. You hear a beep in the headset. The muting is canceled and the Link LED on the base station lights up blue.
If you leave the DECT range

In normal office buildings, the range between headset and base station is up to 55 m. If, during a call, the audio quality deteriorates or the link breaks down completely, you hear a descending sequence of beeps in the headset. The Link LED on the base station lights up red.

- Re-enter the DECT range of the base station within 60 seconds. You hear a ring tone in the headset.
- Press the Link button on the headset to resume the call.

If your softphone supports call control, the call will automatically be ended 60 seconds after leaving the DECT range.

Switching between Phone and PC mode

- Press the PC button or the Phone button on the base station to select the desired mode.
  The button pressed (PC or Phone) is backlit in white, indicating the selected mode.
Making calls using the headset

Calling via the fixed line phone using the headset

If you want to use the headset to accept, make or end calls, you have to establish a wireless link between headset and base station. You can choose between manual and automatic link establishment (see “Auto Link” on page 16):

<table>
<thead>
<tr>
<th>Switch position</th>

</tbody>
</table>

Managing calls without using a call control functionality

**Accepting a call:** You hear the ring tone of the fixed line phone. Press the Link button on the headset. Lift the handset or press the “accept call” button on your fixed line phone.

**Making a call:** Press the Link button on the headset to establish a link between base station and headset. Lift the handset and dial the desired number. The phone connection is established.

**Ending a call:** Hang up the handset or press the “end call” button on your fixed line phone.
Managing calls using the headset

Managing calls using a call control functionality (EHS, HSL 10)

**Accepting a call:** You hear a ring tone in the headset. Press the Link button on the headset to accept the call. The handset lifter/electronic hook switch lifts the handset.

**Making a call:** Dial the desired number. Press the Link button on the headset to establish a link between base station and headset. The phone connection is established automatically.

**Ending a call:** Press the Link button. If the other party hangs up, your telephone and your headset become automatically ready to receive the next call.

Frequent callers who use an electronic hook switch with DHSG capability are recommended to activate the “Fast Link” function for faster link establishment (see page 15)

<table>
<thead>
<tr>
<th>Switch position</th>
<th>Function</th>
</tr>
</thead>
</table>
| ![Switch positions](image) | Fast Link (only when DHSG standard is used)  
Recommended for frequent callers. Shorter battery life. Fast link establishment without delay due to hidden link to the base station. |

**Switching a call between headset and fixed line phone**

- Press the Link button on the headset to switch between headset and handset of the fixed line phone during an ongoing call.

  *In case of a fixed line phone with a handset lifter/an electronic hook switch, this switching can only be done on the fixed line phone.*
Making calls using the headset

Calling via the computer using the headset

If you want to use the headset to accept, make or end calls, you have to establish a wireless link between headset and base station. You can choose between manual and automatic link establishment (see “Auto Link” on page 16):

<table>
<thead>
<tr>

</table>

Managing calls without using the “HeadSetup” call control functionality

Accepting a call: The softphone signals that you are receiving a call. You hear a ring tone in the headset. Click on “Accept call” on your softphone.

Making a call: Press the Link button on the headset to establish a link between base station and headset. If the “Auto Audio” function is activated, this step is not necessary (see page 19). Start the call using your softphone.

Ending a call: End the call using your softphone.
Managing calls using the “HeadSetup” call control functionality

Accepting a call: The softphone signals that you are receiving a call. You hear a ring tone in the headset. Press the Link button on the headset to accept the call.

Making a call: Start the call using your softphone, the audio signal is automatically transmitted to the headset.

Ending a call: Press the Link button. If the other party hangs up, your softphone and your headset become automatically ready to receive the next call.
Holding a conference call

The headset system allows you to hold a conference call with up to 4 DW series headsets. The first headset paired (master) is used to control the call establishment and end of conversation.

Pairing the master headset with the base station

- Place the master headset into the base station and wait until the headset LED lights up blue. Take the headset out of the base station and press the Link button to pair the headset with the base station. The Link LED on the base station lights up blue.

Adding a guest headset to a conference call

- Place the guest headset into the base station of the master headset. The Headset LED alternately flashes blue/red until a link to the base station is established. The Headset LED flashes 3 times blue.
- Take the guest headset out of the base station. You hear a beep in the master headset.
- To add the guest headset to the conference call, press the Link button on the master headset within 15 seconds.
- Repeat this procedure to add additional guest headsets to the conference call.
- Call the other party.

Dropping a guest headset from the conference call

- Press the Link button on the guest headset. The guest headset is dropped from the conference call.

Ending a conference call

- Use the master headset to end the conference call or to disconnect the link to the base station. The guest headsets are automatically dropped from the conference call.

To subsequently use the guest headset with other base stations, place the guest headsets into the other base stations. The Headset LED alternately flashes blue/red until a link is established.
Charging the headset and storing the headset system

Charging the headset

Always store the headset in the base station to ensure that it is fully charged when needed. The intelligent battery charging technology prevents over-charging.

Place the headset into the magnetic holder of the base station. The Headset LED lights up blue and the rechargeable battery is being charged. The Charge status LED on the base station indicates the charge status:

- Shortly before the rechargeable battery is about to run flat, only one LED segment lights up weakly. The Headset LED flashes red and you hear three beeps. You have several minutes of battery reserve. When the rechargeable battery is flat, the headset switches off.

<table>

</tbody>
</table>

If the headset is outside the range of the base station, it will switch off after 30 minutes in order to conserve battery power.
Charging the headset using the optional CH 10 headset charger

The CH 10 headset charger is an optional accessory available from your Sennheiser partner. The CH 10 allows you to charge additional DW series headsets, e.g. for sharing the same base station when working shifts.

Refer to the instruction manual of the CH 10 for more information.
Switching the headset system off during extended non-use

You can switch off the headset system (1) or the headset (2) when not using the products for extended periods of time (e.g. when you are on holiday).

Switching the headset system off

1. Disconnect the base station from the mains power supply. The base station switches off immediately, the headset switches off about 30 minutes later.

2. Press and hold the Link button for 5 seconds to switch off the headset immediately. The Headset LED flashes 3 times red, the headset is switched off completely. The Link LED on the base station lights up red after a short time, the Charge status LED on the base station goes off.

Switching the headset system on and pairing the components

- Plug the power supply unit into a wall socket. The base station is switched on.
- Place the headset into the magnetic holder of the base station. The Headset LED flashes 3 times blue and then lights up blue. The base station and the headset are paired.
Sharing a workplace

The headsets and base stations of the DW series are compatible with each other. If, for example, you share a workplace with different headsets, the last headset paired with the base station can be used without more ado.

Place the headset to be used into the magnetic holder of the base station.

The Headset LED alternately flashes blue/red until the headset is successfully paired with the base station. The Headset LED flashes 3 times blue and then goes off. You can now use the newly paired headset.

If pairing has failed, the Link LED on the base station lights up red or is off. Repeat the procedure.
Using the headset with a third party base station (DECT-GAP telephone)

- Place the headset at a maximum distance of 1 m from the third party base station.

- Simultaneously press and hold the headset’s Link button and Audio button for 5 seconds. The headset switches to a special pairing mode and the Headset LED alternately flashes blue/red.

- Set the third party base station to a special pairing mode (see the instruction manual of the third party base station). The default code for the headset is “0000”. The headset pairs with the third party base station. If pairing is successful, the Headset LED goes off.

If pairing is not successful within 60 seconds, the headset switches back to standby mode.

To pair the headset again with a DW series base station:

- Simultaneously press and hold the headset’s Link button and Audio button for 5 seconds. The headset switches to a special pairing mode and the Headset LED alternately flashes blue/red.

- Place the headset into the magnetic holder of the base station. The Headset LED flashes 3 times blue and then lights up blue. The base station and the headset are paired.
Cleaning and maintaining the headset system

**CAUTION**
Liquids can damage the electronics of the product!
Liquids entering the housing of the product can short-circuit the electronics.

► Keep all liquids far away from the product.
► Do not use any solvents or cleansing agents.

► Before cleaning, disconnect the base station from the mains power supply.
► Only use a dry and soft cloth to clean the product.
► Clean the charging contacts of the base station and the charging contacts of the headset from time to time using e.g. a cotton swab.
Replacing the ear pads

For reasons of hygiene, you should replace the ear pads from time to time. Spare ear pads are available from your Sennheiser partner.

**DW Office – HS**
1. Carefully remove the old ear pad from the ear cup. Make sure that the fastening ring of the old ear pad is also removed from the ear cup.
2. Pull the collar B of the ear pad over the notch A of the headband.
3. Turn the ear pad counter-clockwise over the notch until the collar completely surrounds the ear cup.

**DW Pro1/Pro2 – HS**
1. Carefully remove the old ear pad from the ear cup.
2. Attach the new ear pad to the ear cup by pressing firmly around the ear pad.
Cleaning and maintaining the headset system

Replacing the headset’s rechargeable battery

**CAUTION**

*Damage to the product due to improper handling*

The cables can be kinked or damaged if you open the battery compartment too jerkily.

- Carefully open the battery compartment and loosen the connector plug of the rechargeable battery.

Spare rechargeable batteries are available from your Sennheiser partner. Only use spare rechargeable batteries recommended by Sennheiser.

**DW Office – HS**

1. Remove the earhook or the headband (see page 11) and open the battery compartment.

   ![Illustration](image1)

2. Carefully move the battery compartment cover in the direction of the arrow until you overcome a slight resistance. Remove the rechargeable battery and carefully loosen the connector plug of the rechargeable battery.

   ![Illustration](image2)

3. Insert the connector plug of the new rechargeable battery into the connection socket. Observe correct orientation of the connector plug.

   ![Illustration](image3)

4. Close the battery compartment.

   ![Illustration](image4)

**CAUTION**

*Damage to the product due to improper handling*

The cables can be kinked or damaged if you open the battery compartment too jerkily.

Carefully open the battery compartment and loosen the connector plug of the rechargeable battery.
Headset Pro1 – HS

1. Open the battery compartment cover.
2. Remove the rechargeable battery and carefully loosen the connector plug of the rechargeable battery.
3. Insert the connector plug of the new rechargeable battery into the connection socket. Observe correct orientation of the connector plug.
4. Replace the battery compartment cover.
Cleaning and maintaining the headset system

Headset Pro2 – HS

1 Carefully remove the ear pad from the ear cup where the battery compartment is located.
2 Open the battery compartment.

3 Remove the rechargeable battery and carefully loosen the connector plug of the rechargeable battery.
4 Insert the connector plug of the new rechargeable battery into the connection socket. Observe correct orientation of the connector plug.
5 Replace the battery compartment cover.
6 Reattach the ear pad to the ear cup by pressing firmly around the ear pad.
If a problem occurs

For causes and solutions that are mainly related to the base station, refer to the chapter “If a problem occurs ...” in the “Setup Guide”.

Manufacturer Declarations

Warranty
Sennheiser Communications A/S gives a warranty of 24 months on this product. For the current warranty conditions, please visit our website at www.sennheiser.com or contact your Sennheiser partner.

In compliance with the following requirements
  Please dispose of this product at the end of its operational lifetime by taking it to your local collection point or recycling center for such equipment.
- Battery Directive (2006/66/EC)
  The product’s built-in rechargeable batteries can be recycled. In order to protect the environment, please dispose of defective products with their rechargeable batteries as special waste or return them to your specialist dealer.

CE Conformity

CE 1321
- Low Voltage Directive (2006/95/EC)
- ErP Directive (2009/125/EC)
- RoHS Directive (2011/65/EU)

The declaration is available at www.sennheiser.com. Before putting the product into operation, please observe the respective country-specific regulations!

Statements regarding FCC and Industry Canada

FCC Declaration of Conformity (DoC)

We, Sennheiser Electronic Corporation
One Enterprise Drive • Old Lyme •
CT 06371 • USA
Tel: +1 (860) 434 9190, ext. 144
Fax: +1 (860) 434 1759

declare the above device comply with the requirements of Federal Communications Commission.

This device complies with Part 15 of the FCC Rules. Operation is subjected to the following two conditions:
1) This device may not cause harmful interference, and
2) This device must accept any interference received, including interference that may cause undesired operation.

Responsible Party: Greg Beebe

This equipment complies with Part 15 of the FCC Rules and with RSS-213 of Industry Canada. Operation is subject to the following two conditions: (1) this equipment may not cause harmful interference, and (2) this equipment must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate...
radio frequency energy and, if not installed and used in accordance with
the instructions, may cause harmful interference to radio communications.
However, there is no guarantee that interference will not occur in a
particular installation. If this equipment does cause harmful interference
to radio or television reception, which can be determined by turning the
equipment off and on, the user is encouraged to try to correct the
interference by one or more of the following measures:

• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to
  which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

This class B digital equipment complies with the Canadian ICES-003.
Changes or modifications made to this equipment not expressly approved
by Sennheiser electronic Corp. may void the FCC authorization to operate
this equipment. Before putting the equipment into operation, please
observe the respective country-specific regulations!
The headsets DW 10 HS/DW 20 HS/DW 30 HS comply with Industry
Canada RF radiation exposure limits for devices used by the general public.
They have been tested for SAR and have complied with Industry Canada
SAR limits for devices used by the general public.
